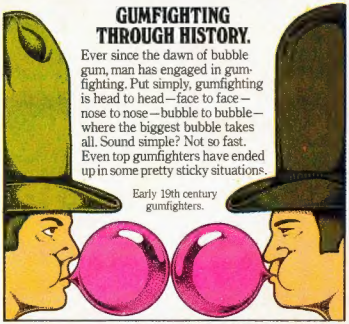
GUMFIGHTING PRACTICE AND TECHNIQUES.

GUMFIGHTING THROUGH HISTORY.

Ever since the dawn of bubble gum, man has engaged in gumfighting. Put simply, gumfighting is head to head—face to face—nose to nose—bubble to bubble—where the biggest bubble takes all. Sound simple? Not so fast. Even top gumfighters have ended up in some pretty sticky situations.



Early 19th century gumfighters.

THE CHEW TO CHOOSE.

To get you started off on the right foot, we'd like to get you started off on the right bubble gum. New Hubba Bubba® Bubble Gum. Soft and juicy Hubba Bubba is the brand new bubble gum with amazing no-stick bubbles.™ That's right, *no-stick bubbles!* And no-stick bubbles mean you can blow bubbles as big as you want and not have to worry about them sticking to your face. Does Hubba Bubba *really* work? 98.8% of the faces tested said yes.

GUMFIGHT PRACTICE DRILL.

The secret to becoming a great gumfighter is practice, practice, and more practice. And the only gum to practice with is new Hubba Bubba. So pick up a pack and pop a soft, juicy chunk in your mouth. While you're enjoying that great long-lasting Hubba Bubba flavor, proceed with this simple yet effective gumfight drill:

©1979 Wm. Wrigley Jr. Company

ALL BUBBLE GUMS ARE NOT ALIKE.

The kid on the left is blowing bubbles with another gum. The kid on the right is blowing bubbles with new Hubba Bubba. Note the size of that Hubba Bubba bubble.

As you see, a sticky situation is developing on the left. But not on the right.

Notice the Hubba Bubba bubble comes right off the face and goes back in the mouth. As for the bubble gum on the left, those are the breaks.

To be sure you're getting the genuine article (Hubba Bubba in original or mint flavors), study the picture below very carefully. Then repeat: Hubba Bubba—Hubba Bubba—Hubba Bubba—Hubba Bubba—Hubba Bubba—Hubba Bubba.

Get some delicious new Hubba Bubba soon and see for yourself. Your bubble troubles are over.

SOFT. JUICY. DELICIOUS.

BIG BUBBLES. NO TROUBLES.

Begin blowing bubble. You will note that Hubba Bubba's amazing formula lets you blow an incredibly large bubble.

When the Hubba Bubba bubble breaks do *not* be alarmed. Hubba Bubba is not your ordinary bubble gum.

Simply remove Hubba Bubba from your face. That's right, simply remove and replace in mouth. Return to step 1.

After you have mastered this basic gumfighting technique, try it out on someone. Remember for a successful gumfight, be sure your opponent is *not* chewing Hubba Bubba Bubble Gum—the soft and juicy bubble gum with amazing no-stick bubbles.

IN THE SUMMER OF 1944, A BATTALION OF THE IMPERIAL JAPANESE ARMY HAD BEEN WIPED-OUT IN A FIERCE BATTLE WITH U.S. MARINES ON THE TINY ISLAND OF KIAK. THERE WAS ONLY ONE SURVIVOR IN THE SERVICE OF THE EMPEROR.. CAPT. YOSHIMA IBI!

The Will Power Struggle, Battle of the Bulge and the War Against Fat have just been won, and I want to share the Victory with you. Dozens of Weight Loss Programs advertise their great results, but have you ever noticed, they all want your money before they prove their claims? I am so confident that DYNASLIM will quickly and easily burn away all of your unwanted fat that I want you to:

LOSE NOW — PAY LATER!

HERE IS THE TRUTH

Have you been reading all the extravagant claims made by certain weight loss programs that you will lose 6 lbs the first 48 hours and up to 90 lbs the first 60 days? Well, if you tried any of these programs, you now know the sad truth. You didn't because it's impossible except through surgery to lose that amount of fat so quickly. Oh, sure, if you stepped on the scales after 48 hours on any fasting or semi-fasting program they may register a loss of 6 lbs but this is mostly water, not fat. That's why you seem to gain back all the weight you lost and more the moment you start eating normally again. If you doubt what I say, ask your Doctor. With Dynaslim you lose FAT and only FAT and you keep it off. Your weight doesn't go up and down like a yo-yo because the Dynaplan puts you in control. The Dynaplan makes you slim, more youthful, more attractive and what's more it can keep you that way all the days of your life. I guarantee it!

EARLY ARTILLERY

To compare a Roman catapult with a modern trench mortar seems absurd. Yet the only basic difference is the kind of energy that sends the projectile on its way. In the dawn of history, war engines were performing the function of artillery. Which may be loosely defined as a means of hurling missles too heavy to be thrown by hand. And with these crude weapons the basic principles of artillery were laid down. The Scriptures record the use of ingenious machines on the walls of Jerusalem eight centuries B.C. - machines that were probably the predecessors of the catapult and ballista getting power from twisted ropes made of hair, hide or sinew. The ballista had horizontal arms like a bow. The arms were set in rope. A cord fastened to the arms like a bowstring, fired arrows, darts, and stones. Like a modern field gun, the ballista shot low and directly toward the enemy.

The catapult was the howitzer, or mortar, of its day and could throw a hundred - pound stone 600 yards in a high arc to strike the enemy behind his wall or batter down his defenses. "In the middle of the ropes, a wooden arm rises like a chariot pole," wrote the historian Marcellinus. "At the top of the arm hangs a sling. When battle is commenced, a round stone is set in the sling. Four soldiers on each side of the engine wind the arm down until it is almost level with the ground. When the arm is set free, it springs up and hurls the stone forth from its sling." In early times the weapon was called a "scorpion," for like this dreaded insect it bore its "sting" erect.

The trebuchet was another war machine used extensively during the Middle Ages. Essentially, it was a seesaw. Weights on the short arm swung the long throwing arm. These weapons could be used with telling effect. As the Romans learned from Archimedes in the siege of Syracuse (214-212 B.C.) as Plutarch relates, "Archimedes soon began to play his engines upon the Romans and their ships; and shot stones of such an enormous size and with so incredible a noise and velocity that nothing could stand before them. At length, the Romans were so terrified that, if they saw but a rope or a beam projecting over the walls of Syracuse, they cried out that Archimedes was leveling some machines at them, and turned their backs and fled." Long after the introduction of gunpowder, the old engines of war continued in use. Often they were side by side with the cannon.

Chinese "thunder of the earth" (an effect produced by filling a large bombshell with a gunpowder mixture) sounded faint reverberations among the philosophers of the western world as early as A.D .300. Though the Chinese were first instructed in the scientific casting of cannon by missionaries during the 1600's, crude cannon seem to have existed in China during the twelfth century and even earlier.

In Europe, a ninth century Latin manuscript contains a formula for gunpowder. But the first show of firearms in western Europe may have been by the Moors, at Saragossa, in A.D. 1118. In later years, the Spaniards turned the new weapons against their Moorish enemies at the Siege of Cordova (1280) and the capture of Gibraltar (1306). It therefore follows that the Arabian madfaa, which in turn had doubtless descended from an eastern predecessor, was the original cannon brought to western civilization. This strange weapon seems to have been a small, mortar - like instrument of wood. Like an egg in an egg cup, the ball rested on the muzzle end until the firing of the charge tossed it in the general direction of the enemy.

Another primitive cannon, with narrow neck and flared mouth, fired an iron dart. The shaft of the dart was wrapped with leather to fit tightly into the neck of the piece. A red - hot bar thrust through a vent ignited the charge. The range was about 700 yards. The bottle shape of the weapon perhaps suggested the name pot de fer (iron jug) given early cannon. In the course of evolution, the narrow neck probably enlarged until the bottle became a straight tube.

During the Hundred Years' War (1339-1453) cannon came into general use. Those early pieces were very small, made of iron or cast bronze, and fired lead or iron balls. They were laid directly on the ground with muzzles elevated by mounding up the earth. Being cumbrous and inefficient, they played little part in battle, but were quite useful in a siege.

And so as the years went by, the experts, or even the not - so - expert were busy trying to improve these "engines of war."
